

PVB FILM

Specifications

PVB film is made from PVB resin and plasticizer. It is a non-toxic and smell-free soft sheet material with thickness between 0.2mm-1.52mm, the best material for the interlayer of safety glass as its wonderful product property such as anti-penetration, anti-ultraviolet, Soundproof etc.

Laminated glass is a multifunctional glazing material that is manufactured by permanently bonding two or more pieces of glass with layers of Polyvinyl Butyral. (PVB) interlayer, under heat and pressure, to create a single construction. It not only has a good optical nature, but also resistant to penetration, ultraviolet etc, it is widely used in areas such as defense, industry, transportation construction etc.
